SUMMARY

Full-stack software engineer, **6 years** shipping products end-to-end, the last 3+ at a European healthtech startup. I own features from data model to shipped UI in small remote teams — API design, data modelling, interfaces, performance, deployment — and work **AI-first**, using Claude Code and agentic tooling daily with tests as the verification loop. Track record of **0→1 builds**: two products of my own with real users, plus high-stakes **FHIR medical data** integrations and two platform migrations led end to end.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Dart, SQL, HTML/CSS
Frontend: SvelteKit, React, Next.js, Vue, Tailwind CSS, responsive design
Backend: Node.js, Nest.js, Express, FastAPI, REST API design
Data & Cloud: PostgreSQL, SQLite, Convex, AWS (multiple services), Docker, GitHub Actions CI/CD
Mobile: Flutter, Dart, native iOS/Android release pipelines
Testing & Tools: Playwright, Selenium, Git, Linear, Figma, Claude Code / AI-assisted development
Integrations: FHIR (medical records), Apple & Google Wallet, WhatsApp Business

SOFTWARE ENGINEERING EXPERIENCE

Software Engineer, Full Stack Nov. 2022 – Present
Florie — healthtech startup Remote, Europe-based

- Own features **end-to-end** across a **SvelteKit** frontend and **Nest.js** backend, from concept to production in short cycles.
- Built **FHIR medical-record integrations** with ECW — high-stakes work demanding precise state handling and data sync on regulated health data.
- Led migration of native iOS/Android apps to a **single Flutter codebase**, speeding up release cycles and removing duplicated platform code.
- Drove the web UI migration from **Vue to SvelteKit** as part of a stack modernisation, keeping the Flutter apps continuously in sync with the core product.
- Work **AI-first** day to day: plan, implement, test and self-review with **Claude Code**, using **Playwright** and unit/integration tests as the verification loop.

Software Developer Jun. 2021 – Nov. 2022
Bauer DeutschAkademie — education Remote

- Built a **React.js** system for managing and issuing course-completion certificates.
- Handled WordPress administration and **SEO optimisation** across the public web properties.

Software Engineer (Freelance) Jun. 2020 – Nov. 2020
Solbicon — real estate Cuenca, Ecuador

- Designed and shipped a **real-estate portal from the ground up** as the sole engineer, owning architecture through delivery.

Software Engineer Feb. 2019 – Mar. 2020
TangoCode Inc. — software consultancy Cuenca, Ecuador

- Developed components for a **React/Redux** web application on a US-client engagement.
- Wrote data-recovery and task-automation scripts; built **QA automation with Selenium**.

PRODUCTS I'VE BUILT & SHIPPED

Ganafy — digital loyalty platform for SMBs | *SvelteKit, Nest.js, PostgreSQL* 2023 – Present

- Built and **operate solo** a loyalty platform used by real Ecuadorian small businesses: stamp cards delivered as **Apple & Google Wallet passes**, so the card lives on the customer's phone instead of behind a login.
- Includes an **analytics dashboard**, **role-based access control**, QR validation and push notifications; redesigned onboarding into a wizard taking a new business from signup to live card in **under three minutes**.

Total WA Ecosystem — WhatsApp business tools | *Svelte, TypeScript, Astro* 2023 – Present

- Suite of tools including **wsp.chat**, a link-shortener SaaS, a **Chrome extension** for contact export, and the totalwa.com landing page.

autovideo — transcript-based video editor | *Rust, Tauri 2, SvelteKit, whisper.cpp, ffmpeg* 2026

- macOS app that edits video by **deleting sentences from its transcript**. Runs **fully local** — Metal-accelerated Whisper plus ffmpeg, no third-party upload of user footage — with a typed, independently testable pipeline. github.com/edzzn/autovideo

EDUCATION

Universidad de Cuenca — B.S. Systems Engineering Cuenca, Ecuador
Udacity — Deep Learning Fundamentals Nanodegree Online

WRITING & LANGUAGES

Writing: Essays on AI-assisted engineering practice at edissonreinozo.com/blog — constraining AI to hints and scaffolding when learning a new framework, and a context-engineering method for rebuilding a production site.
Languages: Spanish (native) · English (professional) · German (basic)
